

Test task 1

A simple horizontal form with four input fields labeled Firstname, Lastname, Street, and City, and an Insert button.

1. Create a simple, horizontal form with four fields and an "Insert" button.

The form with data entered: Alex, Lastname, 5th Avenue, New York. A modal dialog is open with the message "localhost:3000 says Fill all data" and an OK button.

2. By pressing the button, check whether the values have been entered in all four fields. If all fields are filled, save the data in a string in the state, otherwise display a message that all fields must be filled.

The form showing a list of entered data below the input fields. Each entry has a Remove button.

Firstname	Lastname	Street	City	
Alex	Vrbaski	5th Avenue	New York	Remove
Peter	Lacni	51. street	New York	Remove

3. The entered data will be displayed below the form in a horizontal box with the "Remove" button. Boxes must be a separate component in a separate file.

The form showing the list of entered data below the input fields. The first entry is Peter, Lacni, 51. street, New York.

Firstname	Lastname	Street	City	
Peter	Lacni	51. street	New York	Remove

4. By pressing the "Remove" button, remove the data together with the box in which it was displayed.
5. Take care of the appearance - the design of the form, copy the appearance from the pictures as closely as possible.
